Introduction

The U-Ring (U-Packing) is the most compact and versatile of the many lip type seals available. In its several configurations, it may be utilized as an ID- Rod seal or an OD - Piston seal. The U-ring with long thin lips has very low dynamic friction and can accommodate out-of-round or eccentric components. Other configurations with short heavy lips provide a more reliable seal at low pressures and are better suited for sealing at high pressures. These variations in design, coupled with the broad range of available Parker materials results in a very versatile line of sealing devices.

HOW THEY SEAL: The seal is obtained by means of the flared, flexible lips coming in contact with the rod or cylinder wall.

You will note that clearance is provided at the heel for minimum friction. Through this design, the packing is pre-loaded when installed. Sealing effectiveness is increased by internal pressure of the air or fluid against the inner surface of the lips.

Figure 1 illustrates an 8400 Series piston seal installed without backup rings. The seal is installed by stretching over the end of the piston and into the groove very similar to an O-Ring. Note that there is very little contact with the walls of the piston or walls of the cylinder except for the areas which actually perform the sealing function. Consequently, the 8400 type seals ride freely with the motion of the piston and generate very little friction (either break-away or operating).

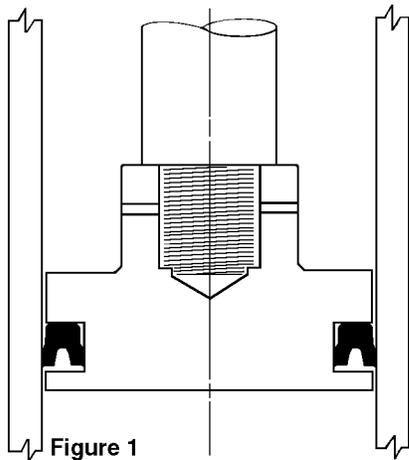

Figure 1

Figure 2 illustrates a double-acting piston seal packing installation.

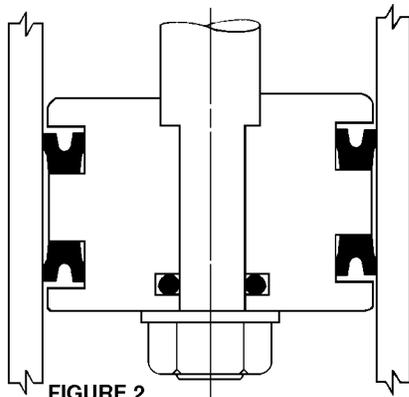

FIGURE 2

Figure 3 illustrates a typical rod packing without wiper.

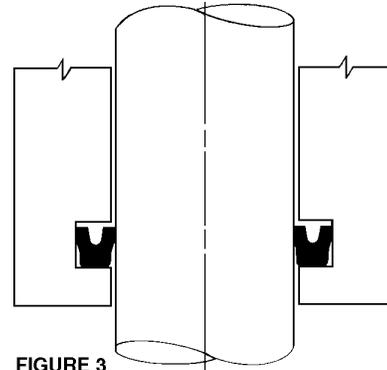

FIGURE 3

Figure 4 illustrates an 8400 Series rod seal with a supporting backup ring and rod wiper/scrapper. Note that the backup ring supports the heel of the U-packing and prevents extrusion when clearances and pressures are excessive.

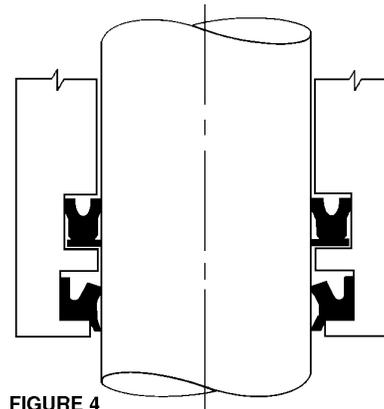

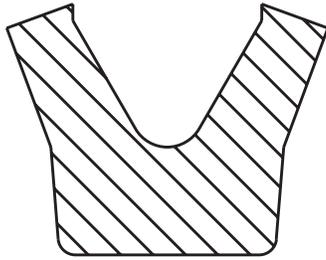

FIGURE 4

NOTE: Surface finish of the working surface of either rods or bores should be a maximum of 16 microinches (14 R_a) for continued sealing effectiveness and long seal life.

ELASTOMERIC COMPOUNDS FOR PARKER U-PACKINGS

COMPOUND IDENTIFICATION AND HARDNESS	TEMPERATURE RANGE (°F)	RECOMMENDED SERVICE
N4180A80 (Nitrile)	-40 to +250	General usage compound for service for 8400/8500 U-Packing. Compatible with most petroleum fluids.
N4181A85 (Nitrile)	-40 to +250	General usage compound for 8600 wipers.
E4183A80 (EPR)	-65 to +275	Phosphate Ester Fluids. (Skydrol)
V4208A90 (Fluorocarbon)	-20 to +400	Applications requiring high temperatures.
N4257A85 (Nitroxile*)	-20 to +250	Low friction applications with little or no lubrication to limit heat generation and wear. Several times the wear and abrasion resistance of Nitriles. Nitroxile is recommended for water based fluids
N4274A85 (ELF) (Internally Lubed Nitroxile*)		ELF - Extreme Low Friction Nitrile (* Parker's trade name for Carboxilated Nitrile)
P4611A90	-40 to +190	Polyurethane elastomer with excellent abrasion, tear, and extrusion resistance. Available in Parkers US, UR, and UP profile U-packings.
P4622A90 (Low Friction Polyurethane)	-65 to +200	Very low friction applications with optimum wear and abrasion resistance over conventional elastomers. Long life material.
P4693A90	-40 to +200	Polyurethane elastomer with excellent abrasion, tear, and extrusion resistance. Available in Parkers BS profile U-packings.
P5008A90	-31 to +230	Polyurethane elastomer with improved compression set and rebound properties. Available in Parkers BS profile U-packings.
SLC4300A90	-40 to +275	Premier Polyurethane with unique temperature range, compression set, and rebound properties. Available in Parker BS and BT profile U-packing.

Rod and Piston Seals and Rod Wipers**8400 Series U-Ring**

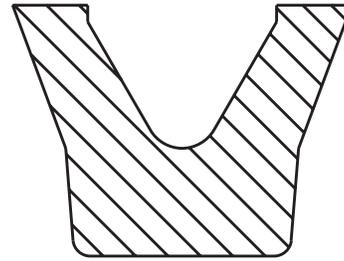

840801000
1 X 1-1/2 X 1/4

PARKER 8400 SERIES U-RINGS with built-in flexibility permit snap-in assembly and increased piston or rod clearance thus providing reduced assembly time and lower cost. The 8400 U-Ring provides an extremely smooth, steady movement with less break-away force required because of their inherent low friction. These characteristics makes the 8400 U-Ring an excellent seal for low speed, low pressure situations.

The 8400 Series U-Ring may be used in any groove design that has "U" type packings of the same cross sectional dimensions. Thus, many existing cylinders as well as new designs can utilize the benefits and advantages of the Parker 8400 Series U-Ring. The compact configuration of the Parker Packing 8400 Series U-Ring provides effective sealing and allow a designer to reduce the total weight of the unit.

The 8400 Series U-Ring is normally supplied in standard Parker Compound 4180, an 80 (A) durometer nitrile material. Compound 4180 performs effectively in the vast majority of applications. Other compounds—nitroxiles, fluorocarbons, ethylene propylene, etc. , are available to fulfill specialized requirements. They may however, require special tooling, and in most cases have greater tolerances than those indicated for the standard compound. If your application requires specialized elastomers, consult a Parker technical representative.

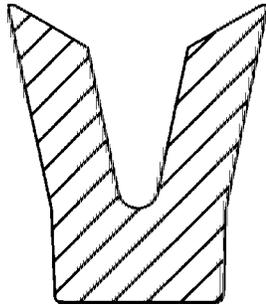

While the 8400 Series U-Packing seals are primarily designed for low and medium pressure applications, the pressure range may be extended by the utilization of supporting backup rings. These backup rings are required where clearances are larger than normal or where pressure exceeds 800 psi.

**8500 Series U-Ring**

850801000
1 X 1-1/2 X 1/4

PARKER 8500 SERIES U-RINGS are the same basic design as 8400 Series but with a flat sealing lip which is better for controlling contamination. The 8400 Series has a chamfered sealing lip which are thicker than the corresponding AN6226 Series. The 8500 Series is similar to the AN6226 Series and is interchangeable where the sizes correspond. Parker Packing 8500 Series are excellent low pressure U-Rings.

The 8500 Series U-Ring is normally supplied in standard Parker Compound 4180, an 80 (A) durometer nitrile material. Compound 4180 performs effectively in the vast majority of applications. Other compounds—nitroxiles, fluorocarbons, ethylene propylene, etc. , are available to fulfill specialized requirements. They may however, require special tooling, and in most cases have greater tolerances than those indicated for the standard compound. If your application requires specialized elastomers, consult a Parker technical representative.

8008/8012 Series U-Ring

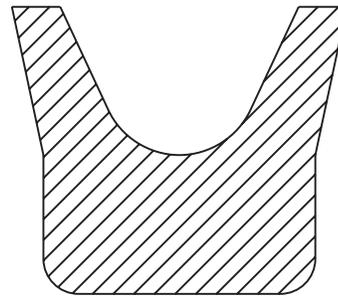

800801000
1 X 1-1/2 X 1/4 X 3/8

801201000
1 X 1-3/4 X 3/8 X 1/2

PARKER RECTANGULAR 8008/8012 U-RINGS are made in a wide range of cross-sections and diameters from less than 1 inch Inside Diameter to over 24 inches Outside Diameter. Although there are few industry standards on U-Ring configurations, Parker Packing has established two standard cross-sections to provide a uniform series of seals for the most popular cylinder bore sizes. The two cross-sections, 1/4" C.S. X 3/8" HT. and 3/8" C.S. X 1/2" HT. are well accepted by cylinder manufacturers and equipment builders.

As ram packing in hydraulic cylinders, it is common to use a much larger U-Ring design to accommodate the wider clearances and bore eccentricities that may exist.

U-Rings of this type are normally supplied in NEO-FAB (Fabric reinforced Nitrile) material to resist extrusion and high shock loads. For special applications the standard Fabric reinforced packing may be provided with a hard extrusion resistant heel material added to enhance its load carrying capacity. For pneumatic applications this same configuration U-Ring is available in resilient 80 shore "A" durometer nitrile, ethylene pro-

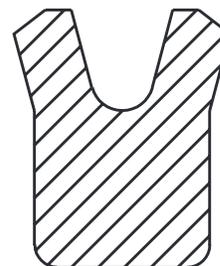

RECTANGULAR (8088 & 8012)
AN6226, US Series Wipers
polyene and nitroxile compounds.

6226 Series U-Ring

000200200W001
1 X 1-1/2 X 1/4

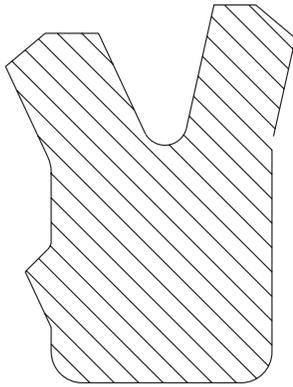

PARKER AN6226 STYLE U-RINGS have a square format where the cross-section = height. Although widely used in industry for low friction pneumatics, these parts were originally designed for early aircraft and ordnance service. Many units still use this type U-Ring. The 6226 U-Ring is available in the most popular sizes and is made of a standard 70 shore "A" Nitrile material.

US Series U-Ring

US25001000
1 X 1-1/2 X 1/4

PARKER "US" SERIES U-RINGS are of symmetrical back-beveled lip design. "US" U-Ring seals are designed to solve specific heavy duty hydraulic sealing problems. The symmetrical design allows for interchangeability between rod and piston applications. Parker "US" U-Rings are dimensioned to be interchangeable with many styles and sizes of other Parker products such as PolyPak Seals and non-symmetrical U-Rings. This permits direct substitution in the same grooves when unexpected problems arise.

While the back-beveled lips do provide some sealing in the reverse direction, these seals should be used only for unidirectional applications.

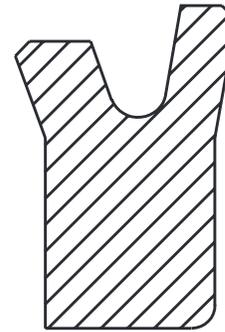

BS Series U-Ring

BS25001000-375
1 X 1-1/2 X 1/4 X 3/8

PARKER BS (Better Sealing) SERIES U-RINGS are hydraulic rod seals ideally suited for heavy-duty mobile and stationary service where leakage must be held to an absolute minimum.

The unique Parker "BS" geometry is highly resistant to side loading and is insensitive to pressure spikes. The BS Profile reduces or eliminates leakage under severe operating conditions. Finite Element Analysis (FEA) engineered geometry provides accurate control of lubricating film thickness on the rod across a wide range of temperature/pressure variations.

The BS Profile reduces wear and "dry run". Rod lubricant is retained in the cavity formed by the secondary lip providing exceptionally low running friction even at low velocities. Sealing performance is outstanding ... even at 0 psi. When installed in tandem with the proper rod wiper, the Parker BS Profile returns excessive lubricant to the system, providing leak free operation, low break-away and running friction, and very quiet operation with reduced slip stick

The unique geometry of the BS profile is extremely resistant to the effects of side loading, resulting in longer seal life and reduced or eliminated leakage.

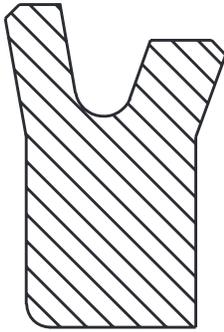

UR Series U-Ring

UR25001000-375
1 X 1-1/2 X 1/4 X 3/8

PARKER UR SERIES U-RINGS are non-symmetrical rod seals, and are designed to solve specific heavy duty hydraulic sealing problems. The back-beveled lip faces the rod where it will provide enhanced low-pressure sealing and wiping action on the rod surface. The non-symmetrical extended lip is used as a stabilizing element on the static sealing surface.

The UR U-Ring is designed to be interchangeable with many styles and sizes of other Parker rod seals, permitting direct substitution in the same grooves when problems arise.

The back-beveled lips do not provide sealing in the reverse directions. These seals should be used only for unidirectional applications.

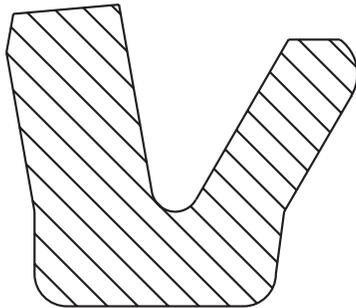

UP Series U-Ring

UP25001000-375
1 X 1-1/2 X 1/4 X 3/8

PARKER UP SERIES U-RINGS are non-symmetrical piston seals, and are designed to solve specific heavy duty hydraulic sealing problems. The back-beveled lip faces the bore where it will provide enhanced low-pressure sealing and wiping action on the bore surface. The non-symmetrical extended lip is used as a stabilizing element on the static sealing surface. The UP U-Ring is designed to be interchangeable with many styles and sizes of other PARKER PACKING piston seals, permitting direct substitution in the same grooves if problems arise.

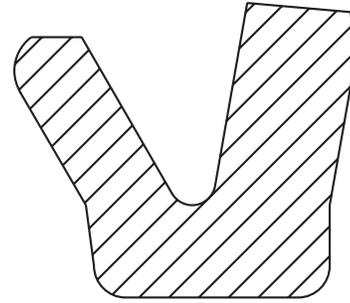

The back-beveled lips do not provide sealing in the reverse directions. These seals should be used only for unidirectional applications.

E4 Series U-Ring

E40801000
1 X 1-1/2 X 1/4

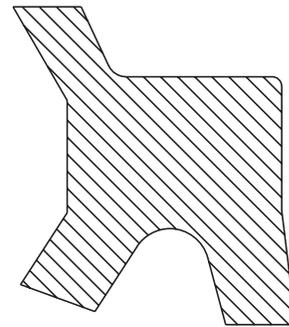

PARKER E4 PROFILE PISTON U-RINGS are specially designed for use in pneumatics applications. The lip design incorporates a rounded dynamic sealing lip for reduced friction and longer seal life. The rounded lip geometry is designed to operate with lubricated air, dry air, and air that is free from oil. When the new rounded lip design is combined with Parkers low friction materials, such as Nitroxile ELF (N4274A85 ELF) even lower frictional characteristics can be achieved.

E5 Series U-Ring

E50801000
1 X 1-1/2 X 1/4

PARKER E5 PROFILE ROD U-RINGS are specially designed for use in pneumatics applications. The lip design incorporates a rounded dynamic sealing lip for reduced friction and longer seal life. The rounded lip geometry is designed to operate with lubricated air, dry air, and air that is free from oil. When the new rounded lip design is combined with Parkers low friction materials, such as Nitroxile ELF (N4274A85 ELF) even lower frictional characteristics can be achieved.

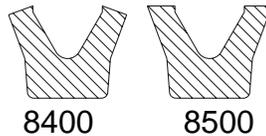

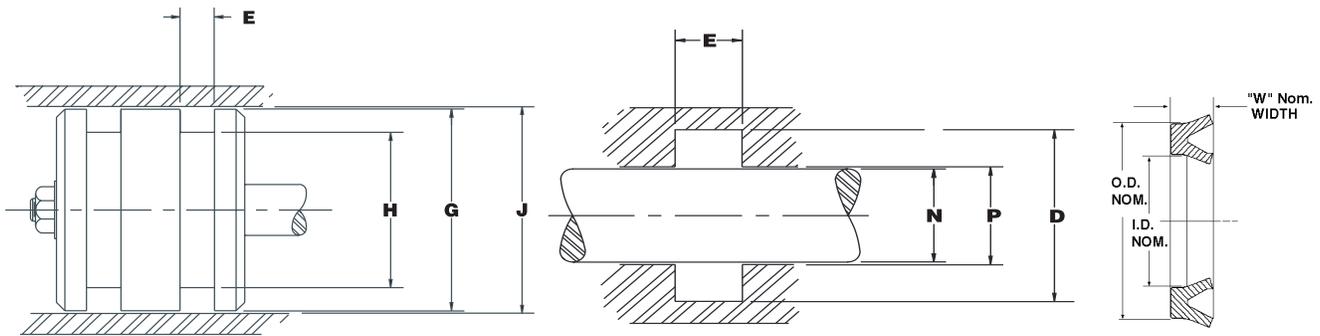

8600 Series Wipers

860001000
FOR 1" ROD

PARKER ROD WIPER: 8600 SERIES This specially designed double lip rod wiper provides the ultimate in wiper action to remove foreign material from the exposed rod while still maintaining an adequate lubricating film. It protects both the rod and the primary seal. 8600 Rod Wipers are available in many compounds.

The standard compound is 4181, an 80 durometer nitrile material. Other compounds are available as noted in information on 8400 Series seals. Not recommended for use with high squeeze seals such as a PolyPak.

NOTES: ¹ Rubber Compounds: 4180 (Nitrile, 80 Durometer standard compound) for 8400 and 8500 Series U-Packings. Other compounds available on request. Special tooling required for Fluorocarbon and other special compounds.

² DESIGN CONSIDERATIONS: Pressures to 2500 psi, surface finish 8-16 micro inches RMS and an 8600 Wiper can be used with an 8400 series U-packing or similar seal. See PPD-3870F for Polymyte Backup Rings. Consult Factory for tooling availability and groove dimensions not listed.

NOTES: ¹ Rubber Compounds: 4180 (Nitrile, 80 Durometer standard compound) for 8400 and 8500 Series U-Packings. Other compounds available on request. Special tooling required for Fluorocarbon and other special compounds.

² DESIGN CONSIDERATIONS: Pressures to 2500 psi, surface finish 8-16 micro inches RMS and an 8600 Wiper can be used with an 8400 series U-packing or similiar seal. See PPD-3870F for Polymyte Backup Rings. Consult Factory for tooling availability and groove dimensions not listed.

Rod and Piston Seals and Rod Wipers**E4 Series U-Ring**

E40801000

1 X 1-1/2 X 1/4

PARKER E4 PROFILE PISTON U-RINGS are specially designed for use in pneumatics applications. The lip design incorporates a rounded dynamic sealing lip for reduced friction and longer seal life. The rounded lip geometry is designed to operate with lubricated air, dry air, and air that is free from oil. When the new rounded lip design is combined with Parkers low friction materials, such as Nitroxile ELF (N4274A85 ELF) even lower frictional characteristics can be achieved.

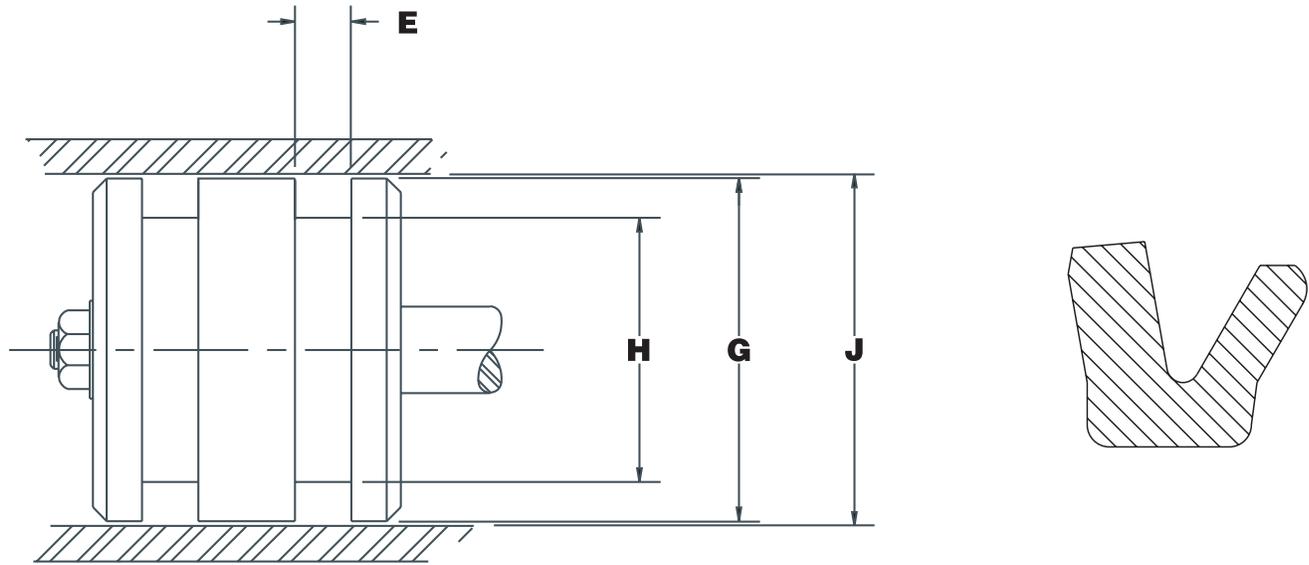

**E5 Series U-Ring**

E50801000

1 X 1-1/2 X 1/4

PARKER E5 PROFILE ROD U-RINGS are specially designed for use in pneumatics applications. The lip design incorporates a rounded dynamic sealing lip for reduced friction and longer seal life. The rounded lip geometry is designed to operate with lubricated air, dry air, and air that is free from oil. When the new rounded lip design is combined with Parkers low friction materials, such as Nitroxile ELF (N4274A85 ELF) even lower frictional characteristics can be achieved.

**6226 Series U-Rings**

000200200W001

1 X 1-1/2 X 1/4

PARKER AN6226 STYLE U-RINGS have a square format where the cross-section = height. Although widely used in industry for low friction pneumatics, these parts were originally designed for early aircraft and ordnance service. Many units still use this type U-Ring. The 6226 U-Ring is available in the most popular sizes and is made of a standard 70 shore "A" Nitrile material.

NOTES: ¹ Rubber Compounds: Nitrile 70 Shore "A" Durometer standard compound. Special tooling required for Fluorocarbon and other special compounds.
² DESIGN CONSIDERATIONS: Pressures to 2500 psi, surface finish 8-16 micro inches RMS and an 8600 Wiper can be used. See PPD-3870F for Polymyte Backup Rings. Consult Factory for tooling availability and groove dimensions not listed.

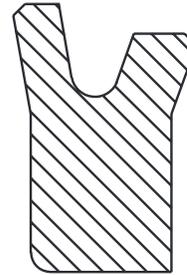

Design Charts for Piston-Seal Applications

Low Pressure to 5000 PSI

U-Packing seals are available in more than one cross-section per seal diameter. The larger the cross-section the longer the life and reliability of the seal, and the less critical the equipment design considerations, such as tolerance, and clearances. Always select the largest cross-section compatible with installation and equipment design limitations. Friction normally increases with cross-section and installation becomes increasingly difficult.

NOTE: Not all U-Packing sizes listed are tooled in all materials.

Consult the 3701 price list or contact Parker Customer Service (801) 972-3000 for exact part availability.

UP Series U-Ring

UP25001000-375
1 X 1-1/2 X 1/4 X 3/8

PARKER UP SERIES U-RINGS are non-symmetrical piston seals, and are designed to solve specific heavy duty hydraulic sealing problems. The back-beveled lip faces the bore where it will provide enhanced low-pressure sealing and wiping action on the bore surface. The non-symmetrical extended lip is used as a stabilizing element on the static sealing surface. The UP U-Ring is designed to be interchangeable with many styles and sizes of other PARKER PACKING piston seals, permitting direct substitution in the same grooves if problems arise.

The back-beveled lips do not provide sealing in the reverse directions. These seals should be used only for unidirectional applications.

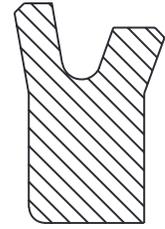

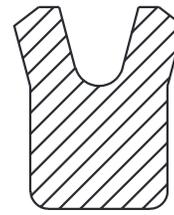

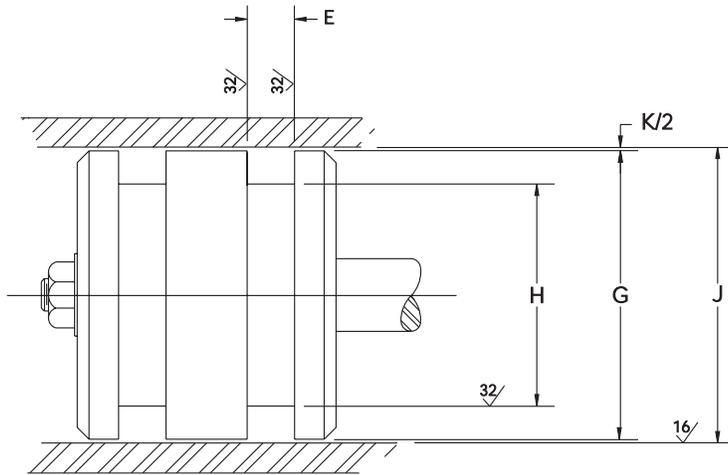

US Series U-Ring

US25001000
1 X 1-1/2 X 1/4

PARKER "US" SERIES U-RINGS are of symmetrical back-beveled lip design. "US" U-Ring seals are designed to solve specific heavy duty hydraulic sealing problems. The symmetrical design allows for interchangeability between rod and piston applications. Parker "US" U-Rings are dimensioned to be interchangeable with many styles and sizes of other Parker products such as PolyPak Seals and non-symmetrical U-Rings. This permits direct substitution in the same grooves when unexpected problems arise.

While the back-beveled lips do provide some sealing in the reverse direction, these seals should be used only for unidirectional applications.

Design Charts for Rod-Seal Applications Low Pressure to 5000 PSI

U-Packing seals are available in more than one cross-section per seal diameter. The larger the cross-section the longer the life and reliability of the seal, and the less critical the equipment design considerations, such as tolerance, and clearances. Always select the largest cross-section compatible with installation and equipment design limitations. Friction normally increases with cross-section and installation becomes increasingly difficult.

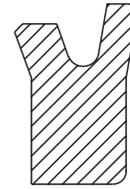

NOTE: Not all U-Packing sizes listed are tooled in all materials.
Consult the 3701 price list or contact Parker Customer Service (801) 972-3000 for exact part availability.

US Series U-Ring
US25001000
1 X 1-1/2 X 1/4

PARKER "US" SERIES U-RINGS are of symmetrical back-beveled lip design. "US" U-Ring seals are designed to solve specific heavy duty hydraulic sealing problems. The symmetrical design allows for interchangeability between rod and piston applications. Parker "US" U-Rings are dimensioned to be interchangeable with many styles and sizes of other Parker products such as PolyPak Seals and non-symmetrical U-Rings. This permits direct substitution in the same grooves when unexpected problems arise.

While the back-beveled lips do provide some sealing in the reverse direction, these seals should be used only for unidirectional applications.

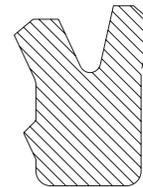

UR Series U-Ring

UR25001000-375
1 X 1-1/2 X 1/4 X 3/8

PARKER UR SERIES U-RINGS are non-symmetrical rod seals, and are designed to solve specific heavy duty hydraulic sealing problems. The back-beveled lip faces the rod where it will provide enhanced low-pressure sealing and wiping action on the rod surface. The non-symmetrical extended lip is used as a stabilizing element on the static sealing surface.

The UR U-Ring is designed to be interchangeable with many styles and sizes of other Parker rod seals, permitting direct substitution in the same grooves when problems arise.

The back-beveled lips do not provide sealing in the reverse directions. These seals should be used only for unidirectional applications.

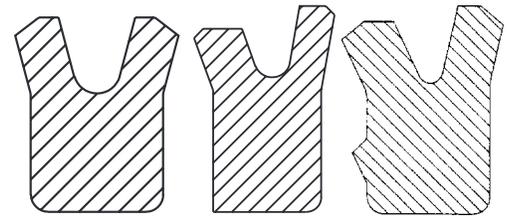

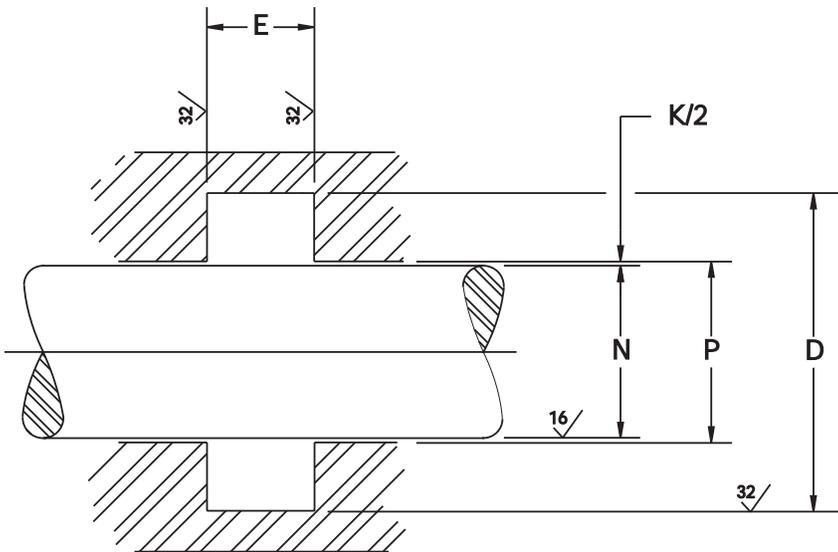

BS Series U-Ring

BS25001000-375
1 X 1-1/2 X 1/4 X 3/8

PARKER BS (Better Sealing) SERIES U-RINGS are hydraulic rod seals ideally suited for heavy-duty mobile and stationary service where leakage must be held to an absolute minimum.

The unique Parker "BS" geometry is highly resistant to side loading and is insensitive to pressure spikes. The BS Profile reduces or eliminates leakage under severe operating conditions. Finite Element Analysis (FEA) engineered geometry provides accurate control of lubricating film thickness on the rod across a wide range of temperature/pressure variations.

Rod and Piston Seals and Rod Wipers

BT U-CUP ROD SEAL

The BT Profile U-Cup is an improved seal design for cylinder rods. The BT is an improvement of the existing BS U-Cup seal with enhancements in lip design, and in the Polyurethane compound used.

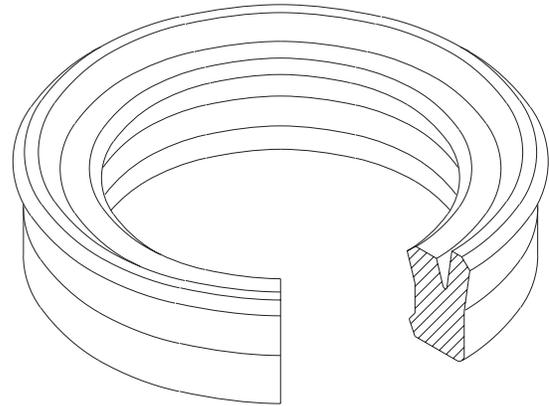

The new BT design has thicker lips than its BS predecessor which produces greater compressive forces in the installed condition. The key benefit is an increased conformity of the elastomer to the metal which improves sealing characteristics.

The secondary lip of the BT U-Cup has been moved down the profile and is now closer to the base to improve stability of the seal in the gland itself. This stability helps limit the rocking motion of the seal as the rod cycles, and in turn can dramatically reduce fluid seepage.

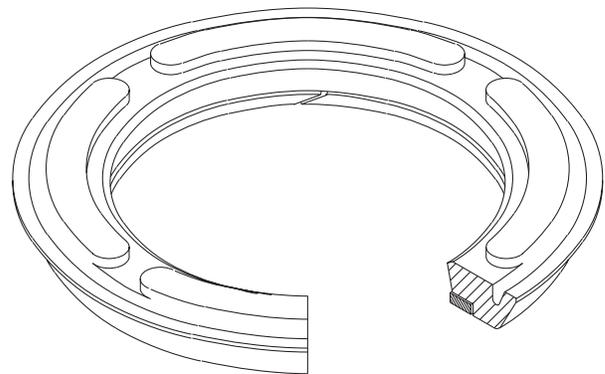

ADVANCED SEALING SYSTEM

When the BT U-Cup is used in combination with the BR Buffer Ring the resulting sealing system provides very long life with an exceptionally dry rod. The buffer ring acts as a primary seal and pressure spike suppressor and at the same time allows trapped fluid, sealed by the BT U-Cup, to be pumped back into the system with a check valve effect.

Using Parker's P4300, low compression set material, also improves seal performance. The advantage of a seal with lower compression set material is that it has a better "memory" for pushing against the rod and gland surfaces. Again the advantage is better conformity of the seal to the metal.

NOTE: Not all Wiper sizes listed are tooled in all compounds. Compound 4181 (80 Durometer Nitrile) is the standard material. Other compounds available upon request. Special tooling may be required for other compounds. Nominal Rod Diameter to nearest fraction. Rod Diameter can vary from the dimension shown by +.005/-0.005. However, more effective wiping action and optimum life will result if close tolerances are held.

Consult Parker Packing Customer Service at (801) 972-3000 for compound availability and additional sizes.

NOTE: Not all Wiper sizes listed are tooled in all compounds. Compound 4181 (80 Durometer Nitrile) is the standard material. Other compounds available upon request. Special tooling may be required for other compounds. Nominal Rod Diameter to nearest fraction. Rod Diameter can vary from the dimension shown by +.005/-0.005. However, more effective wiping action and optimum life will result if close tolerances are held.

Consult Parker Packing Customer Service at (801) 972-3000 for compound availability and additional sizes.
